

React Engineer (m/f)

User Story	
Implement our React Coding Task	
Description	Priority
As a future team mate I want a small React app that displays a list of offers, so I can see if you are the React developer we are looking for.	Normal
	Estimation
	__ SP
Acceptance Criteria	
<ul style="list-style-type: none">● Implement an web app in React (preferably with Redux) that retrieves and displays the offers in a list.● The list of offers can be found at http://cdn.sixt.io/codingtask/offers.json<ul style="list-style-type: none">○ In case any car images are missing, use a fall-back image.● You may use any external frameworks and libraries you like, just add a short note explaining why you chose them.● Offers should only display name, image and price● The list should be a responsive grid, each grid element should be in square format● Show us what you care about when it comes to architecture, structure, clean code, UI/UX, error-handling and automated testing.● Share your code with us via Github, Bitbucket, zip file. Etc.	
Designs	
May be done roughly, but up to you to show us your taste ;)
